

Trace Duality

Claim: If $f \in C^1(I)$, and X, H are self adjoint matrices, then there is a unique quantity $g(X)$ such that

$$\text{tr} Df(X)[H] = \text{tr} Hg(X).$$

We start with a construction from Bhatia's Matrix Analysis: Let $f \in C^1(I)$ and define $f^{[1]}$ on $I \times I$ by

$$f(\lambda, \mu) = \begin{cases} \frac{f(\lambda) - f(\mu)}{\lambda - \mu} & \lambda \neq \mu \\ f'(\lambda) & \lambda = \mu. \end{cases}$$

We call $f^{[1]}(\lambda, \mu)$ the *first divided difference* of f at (λ, μ) . If Λ is a diagonal matrix with entries $\{\lambda_i\}$, We may extend f to accept Λ by defining the (i, j) -entry of $f^{[1]}(\Lambda)$ to be $f^{[1]}(\lambda_i, \lambda_j)$. If A is a self adjoint matrix with $A = U\Lambda U^*$, then we define $f^{[1]}(A) = Uf^{[1]}(\Lambda)U^*$. Now we borrow a theorem from Bhatia:

Theorem 1 (Bhatia V.3.3). *Let $f \in C^1(I)$ and let A be a self adjoint matrix with all eigenvalues in I . Then*

$$Df(A)[H] = f^{[1]}(A) \circ H,$$

where \circ denotes the Schur-product in a basis where A is diagonal.

That is, if $A = U\Lambda U^*$, then

$$Df(A)[H] = U (f^{[1]}(\Lambda) \circ (U^* H U)) U^*.$$

To prove our claim, we need to take the trace of both sides. Since trace is invariant under a change of basis, it is clear that

$$\text{tr} Df(A)[H] = \text{tr} (f^{[1]}(\Lambda) \circ (U^* H U)).$$

If $U = u_{ij}$, $U^* = \bar{u}_{ij}$ and $H = h_{ij}$, then the (i, j) -entry of U^* is

$$(U^* H U)_{ij} = \bar{u}_{ik} h_{k\ell} u_{\ell j}$$

Where we sum over the duplicate indices k and ℓ . While the structure of $f^{[1]}(\Lambda)$ is a bit unruly, our diagonal entries are $f'(\lambda)$. This means that when we take the trace of the Schur product, we have

$$\sum_i f(\lambda_i) \bar{u}_{ik} h_{k\ell} u_{\ell i}$$

Now consider the matrix product $U \text{diag}\{f'(\lambda_1), \dots, f'(\lambda_n)\} U^* H$. Since one of our terms is diagonal, the trace of this multiplication is simple:

$$\text{tr} U \text{diag}\{f'(\lambda_1), \dots, f'(\lambda_n)\} U^* H = \sum_k u_{ik} f(\lambda_k) \bar{u}_{k\ell} h_{\ell i}$$

Since our entries commute, we can relabel our indices $i \mapsto \ell$ $\ell \mapsto k$ $k \mapsto i$ to get

$$\text{tr} U \text{diag}\{f'(\lambda_1), \dots, f'(\lambda_n)\} U^* H = \sum_i f(\lambda_i) \bar{u}_{ik} h_{k\ell} u_{\ell i},$$

See that the quantity $\text{tr } U \text{diag}\{f'(\lambda_1), \dots, f'(\lambda_n)\} U^* H$ is independent of our choice of H , so is it the needed quantity $g(X)$. Further, since $X = U \Lambda U^*$, $g(X) = f'(X)$. This recovers theorem 3.3 of *LEARN TO DO CITATIONS* as we have

$$\text{tr } Df(X)[H] = \text{tr } Hg(X)$$

Now we turn our attention to the example in *citation*. I verified that

$$\begin{aligned} \text{tr } H \cdot \text{div}(1 + XY) &= \text{tr}(H_1 Y + X H_2)(1 + XY)^{-1} \\ &= \text{tr } H_1 Y(1 + XY)^{-1} + H_2(1 + XY)^{-1} X \\ &= \text{tr}(H_1, H_2) \cdot (Y(1 + XY)^{-1}, (1 + XY)^{-1} X), \end{aligned}$$

but how can we be confident that this means we have $\text{div}(1 + XY) = (Y(1 + XY)^{-1}, (1 + XY)^{-1} X)$? We consider the general case: Say that $\text{tr } H \cdot f = \text{tr } H \cdot g$. Since this holds for all H , we may choose our H carefully to show the equality of f and g . Say that H, f, g are k -tuples—we will first show that $f_1 = g_1$ and we will do so entry by entry. Let E_{ij} be the matrix with all zeroes and a 1 in the (i, j) -entry. Now let $H = (E_{ji}, 0, \dots, 0)$. So $\text{tr } E_{ji} f_1 = \text{tr } E_{ji} g_1$. In our products, the only elements on the diagonal are $(f_1)_{ij}$ and $(g_1)_{ij}$, so when we take the trace we have $(f_1)_{ij} = (g_1)_{ij}$. If we do this for every (i, j) , we see that $f_1 = g_1$. Showing that the other components are equal is identical.

QQ: Is this necessarily true? This is very nitpicky, but does the fact that f and g have the same components mean they have the same expression? I see how it would make the same function, but I see a potential issue with domain—if they have different domains then they could have different expressions but still have the same entries when the domains overlap.
